SUMMARY

Data Engineer / AI Engineer with 1+ year of professional experience building cloud data pipelines (GCP→AWS) and NLP/ML systems for enterprise and financial clients. Strong foundations in Python, SQL, PySpark and applied machine learning. Particularly motivated to apply data and AI skills to environmental and wildlife-conservation problems.

SKILLS

Programming & Data: Python (advanced) • SQL (advanced) • PySpark • R/RStudio • HTML • Matlab (basic) • TensorFlow • PyTorch
Cloud & Data Engineering: AWS (S3, Lambda, Step Functions) • GCP • PostgreSQL • GitLab CI/CD • ETL pipeline design
AI & Machine Learning: NLP • Hugging Face Transformers • model fine-tuning & evaluation • classical ML • Deep learning
Other: Web scraping (Selenium) • Excel (advanced) • Flask

EXPERIENCE

Data Engineer / AI Engineer — NFAQ — Kondo, client: Allfunds 2024 – 2025

Madrid, Spain

- Contributed to an end-to-end financial data platform processing revenue data across a PostgreSQL environment with 1,000+ tables and thousands of daily records; built a significant part of the GCP-to-AWS pipeline (Python, PySpark, SQL).
- Designed SQL queries and database schemas supporting complex revenue calculations and downstream client reporting.
- Built and maintained data-processing workflows on AWS (S3, Lambda, Step Functions) across dev, pre-prod and prod via GitLab; redesigned the data flow to cut unnecessary processing, improving efficiency and reducing cloud costs.
- Developed AI proof-of-concepts for automated receipt recognition, payment-status detection and duplicate-document detection, collaborating with the AI team on client demos.

Python • SQL • PySpark • AWS • GCP • GitLab

Data Scientist — HPE x UC3M 2023 – 2024

Madrid, Spain

- Developed an NLP-based AI incident-classification system using Hugging Face Transformers and machine-learning techniques.
- Fine-tuned BART models and evaluated classification performance (accuracy, precision, recall, F1-score), achieving 91% reported accuracy.

Python • NLP • Hugging Face • Machine Learning

EDUCATION

BSc, Data Science & Engineering — Universidad Carlos III de Madrid 2020 – 2024

exchange semester at American University of Sharjah, UAE (2024)

Thesis — Measuring Energy Consumption of Online Ads on Social Networks: automated Python/Selenium pipeline scraping and analyzing 7,277 Facebook/Twitter ads & posts to estimate CPU/GPU/RAM energy use; found Facebook ads consumed ~1.6× more energy than posts, ~8.7× more than Twitter ads.

LANGUAGES

Spanish (native) • English (C2 / Proficient) • German (elementary)

PROJECTS & PORTFOLIO

Personal website — albercm30.github.io

Portfolio combining professional data/AI work with wildlife photography and conservation-travel documentation across 38 countries and 200+ species encountered.

WildCast — github.com/albercm30/WildCast

Wildlife-encounter forecasting platform (Flask + scikit-learn) predicting species-sighting probabilities for a given location and date, calibrated against real GBIF/iNaturalist/eBird sightings and Open-Meteo weather data. Ships as an installable PWA with a full CI/CD pipeline (Docker, GitHub Actions, weekly automated retraining) and 324 automated tests.
